

Examining the Effects of the Collaborative Strategic Reading – High School Intervention on Adolescents With Autism Spectrum Disorders

Research Question

What are the reading, behavioral, and social outcomes of implementing Collaborative Strategic Reading – High School (CSR–HS), an adapted version of CSR, for adolescents with autism spectrum disorders (ASD)?

Reutebuch, C. K., Vaughn, S. R., El Zein, F., Kim, M. K., & Weinberg, A. (under review). Examining the effects of a comprehensive reading intervention for adolescents with autism spectrum disorders.

Participants, Setting, and Materials

PARTICIPANTS

Three high school students with ASD

- Access primarily academic content across the school day
- Read on at least a second-grade instructional level
- Have an IQ in the low-average to above-average range (80 and above)
- Are willing to participate
- Possess skills and abilities to share their ideas, contribute to conversation, and work cooperatively with a student or tutor to complete a reading activity, using taught strategies

Three peer partners

- Identified by staff as a good match for target students with ASD
- Available to participate during target students' CSR–HS sessions
- Have some experience in working with target students

TARGET PARTICIPANT CHARACTERISTICS -

	HECTOR	BRIAN	SOFIA
GRADE	9	10	11
AGE	15	16	17
DIAGNOSIS	ASD	ASD	ASD
INSTRUCTIONAL READING LEVEL (GRADE EQUIVALENT)	3	2	5
WJ-III PC PRETEST	2.0	K8	4.8

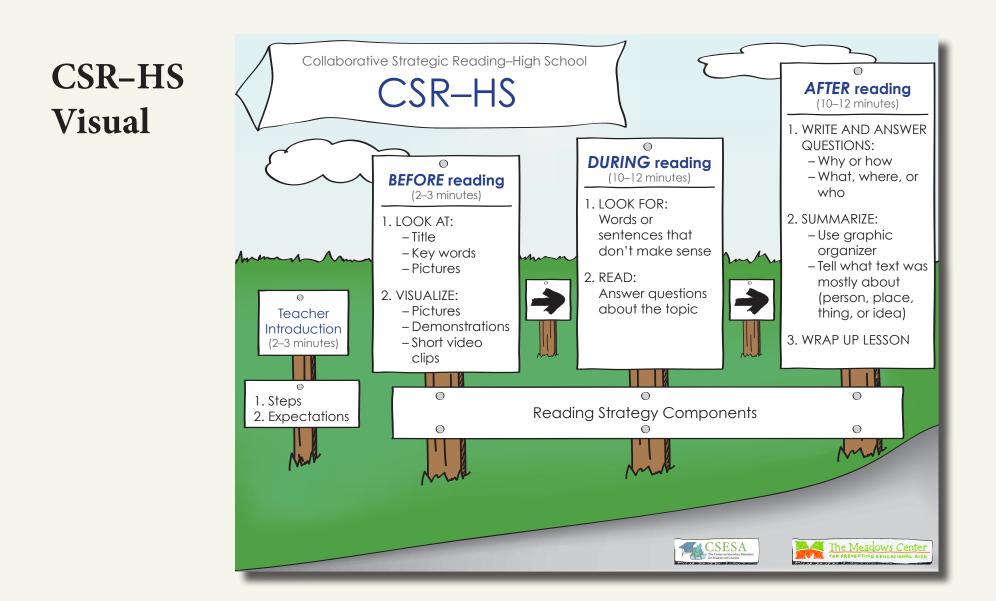

Note. WJ-III PC = Woodcock-Johnson III Tests of Achievement Passage Comprehension subtest.

SETTING

- Rural central Texas high school
- Approximately 30 miles southeast of Austin
- 65% of students economically disadvantaged
- Pullout tutorial sessions in the special education setting

MATERIALS

- CSR–HS visual
- (see below)
- Lesson plan
- Text
- Visual cues for topic
- Learning log
- Self-monitoring checklist
- Question stems
